WORK EXPERIENCE

Intern software developer

Speed POS, Viet Nam

11/2022 - 10/2023

- Participate in developing a handheld POS ordering application, allowing users to place orders and track real-time status.
- Develop online payment options using ATM cards or QR codes within the application.
- Conduct system analysis and write code for application development. Perform testing and debugging, carry out trial operations, and deliver the application to end users.

PROJECTS

OrderX | React Native, .Net, SignalR, APIs, Logging, SQL Anywhere, Figma, Git, VS Code

OCT. 2023

- The practical project during the internship.
- Software product has been delivered.
- Project involves developing a handheld mini POS machine used in restaurants or retail stores for ordering and payment.

Utopia | Java, JavaScript, TypeScript, TailwindCSS, SpringBoot, Socket, API, Git, VS Code

DEC 2023

- The project involves building a social network named Utopia.
- Application allows users to create posts, interact with posts, make friends, send messages,...
- Solved problems relating to asynchronous tasks

FashionManager | Java, Swing, Microsoft SQLServer, JDBC, Netbeans

May. 2022

- Developing a fashion clothing store management software using Java Swing and JDBC
- The software offers several fundamental features for store management, including inventory management, revenue tracking, supplier management, and handling orders from suppliers, among others.
